

FLORIDA ECONOMIC OUTLOOK

The Florida Economic Estimating Conference met in February of 2008 to revise the forecast for the state's economy. As further updated by the Legislative Office of Economic and Demographic Research, the latest forecast reveals an economy burdened in the short run by national and state fiscal shocks, but still showing underlying resilience. Population growth – while slowing – continues to be the state's primary engine of economic growth, fueling both future employment and income growth. All of the comments below are directed to the immediate planning horizon extending through Fiscal Year 2011-12.

RECAP ~ Fiscal Year 2006-07 History

Change in Gross Domestic Product (GDP) has been increasingly used to compare states. While Florida has significantly outperformed the nation as a whole in five of the past six years, two of these years (2004 and 2005) were greatly influenced by the activity sparked by the 2004 and 2005 storms (primarily through insurance payments). More recently, Florida returned to the national growth level.

Other factors are used to gauge the health of an *individual state*. Typically, the two principal economic measures are income and employment growth. Compared to prior conferences, these measures showed that Florida grew at a slower pace in Fiscal Year 2006-07 than originally thought. Personal income growth, initially estimated at 7.5%, ultimately reached only 6.4% for Fiscal Year 2006-07. Similarly, employment managed only a 1.5% growth rate in Fiscal Year 2006-07.

Many numbers were revised downward in the historic data series for 2006-07, and the final results proved to be generally worse than anticipated – particularly in the employment areas. For example, construction employment went from an estimated 2.0% growth to 0.9% - and information employment went from a projected decline of 0.6% to a decline of 1.8%. Other areas were also affected by these changes: Wages & Salaries were estimated to have grown 5.7% in the November data, but only 5.2% at the latest conference, and the unemployment rate went from 3.32% to 3.61%.

Largely, these changes were related to Florida's troubled housing market. The end of the housing boom coupled with increasing mortgage rates caused residential construction activity to dramatically lose steam. The Florida Economic Estimating Conference (FEEC) had expected private housing starts to begin a slow decline in the early summer. In fact new activity plummeted below the anticipated levels through the end of the fiscal year. For all of Fiscal Year 2006-07, there were only 163,900 starts, a 39.7% decrease over the prior year. Much of this loss was attributable to single family starts which fell 51.4% from the prior year to a level of 87,600 units. In another manifestation of the large housing market adjustment facing Florida, existing single family home sales ended the 2006 calendar year 28% down in volume from the prior year, but the median home price still grew 6%.

Florida's economy has essentially moved through three waves of responses to financial shocks. First, as explained above, the end of the housing boom brought lower activity and employment in the construction and financial fields, as well as spillover consumption effects in closely related industries: appliances, carpeting, and other durable goods used to equip houses. This began in the summer of 2005 when sales volume started to decline in response to extraordinarily high prices and increasing mortgage rates. By the summer of 2006, home prices began to fall as well, and owners started to experience negative wealth effects from the deceleration and losses in property value. Because owners perceived themselves as less wealthy, they began to curtail expenditures on discretionary items, largely big-ticket in nature. By the late summer of 2007, Florida's homegrown problems with the housing market were giving way to several national phenomena: a slow slide towards recession and a burgeoning credit crisis.

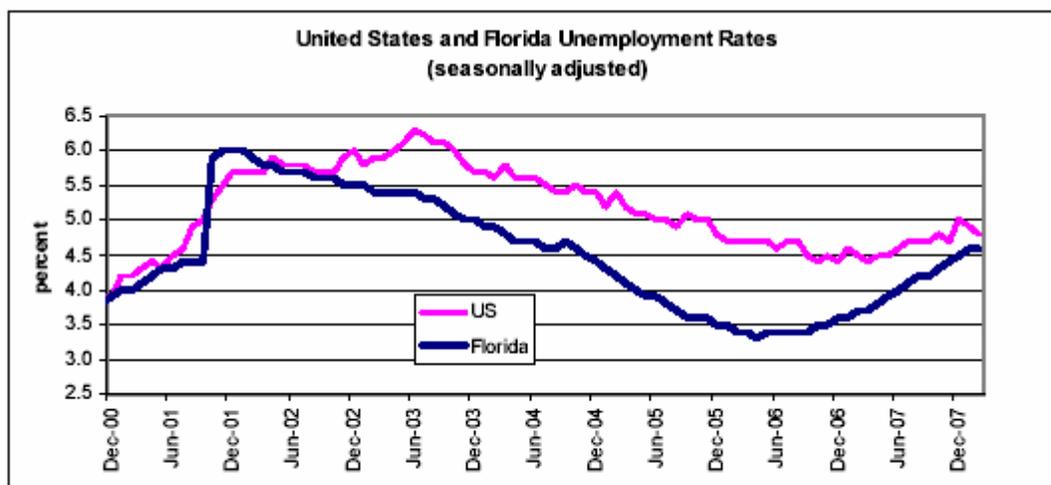

FORECAST ~ Fiscal Years 2007-08 (base) through 2011-12

By the end of September 2007, median prices for existing single family home sales had fallen 9% on a year-over-year basis, and the first inkling of a national credit problem was

coming to light. As the subprime mortgage difficulties surfaced, it became clear that past projections of a relatively quick adjustment in the housing market were overly optimistic. Forecasts were dampened through the end of the fiscal year, and then again as the excess inventory of unsold homes was further swelled by foreclosures and slowing population growth arising from the national economic contraction. Further straining Florida households and businesses, gas prices have now hovered around \$100 a barrel for the last several months, food prices have risen, and the credit crisis has spread well beyond the subprime market to affect the broader financial sector's ability to lend money. The latest forecast anticipates that normal economic growth will not return to Florida until Fiscal Year 2009-10, and many of the risks remain to the downside.

Lower Income Growth Dampens Consumer Spending...Nominal personal income is projected to grow a modest 4.6% in Fiscal Year 2007-08, well below the 5.3% projection in the national forecast. Moreover, Florida's income growth is expected to fall even farther next year to 3.4% before beginning a rebound, ending the forecast period at 6.4%. Per capita income as adjusted for inflation exhibits the same pattern—in real terms, income is expected to increase only 0.7% this year and 0.5% in Fiscal Year 2008-09, but end the planning period at a more respectable 2.6%. Much of the future strength in personal income can be attributed to the expected recovery from recessionary conditions with wages and salaries following the return to growth in real economic activity.

Weaker Employment Conditions in the Short-run...According to the latest nationwide data, Florida was losing jobs (a job growth rate of -0.3% in February) while the nation as a whole stayed weakly positive (+0.6%). Florida's rate represents a loss of 27,700 jobs compared to last February; however, the state's negative over-the-year growth rate actually began in September 2007. Seventy-two percent of the state's job losses are due to the construction downturn. Overall employment is projected to decline -0.1% in Fiscal Year 2007-08, increase to 0.9% in Fiscal Year 2008-09, 2.2% in Fiscal Year 2009-10, 2.4% in 2010-11 and then return to 2.3% in 2011-12.

Source: Florida Agency for Workforce Innovation, Labor Market Statistics Center, Local Area Unemployment Statistics program.

Conversely, Florida's latest unemployment rate (4.6% in February), while high compared to recent history, remained slightly below the national unemployment rate of 4.8%. The estimate anticipates that the elevated levels persist in the near-term – 5.36%, 5.51%, 5.23% and 4.81% over the next four years; however, each of these levels is less than the projected national averages.

Currently, the fastest growing industry in Florida is Education and Health Services, with most of the growth attributable to gains in Health Services. Beginning in Fiscal Year 2008-09 and continuing throughout the forecast period, the growth industry will shift to the professional and business services sector. This employment sector is expected to add nearly 44% of the new jobs forecast for Fiscal Year 2008-09. After losing 1% this year, it is projected to expand 2.3% in Fiscal Year 2008-09 and 5.2% in 2009-10 before decelerating to 4.9% in 2010-11 and 4.1% in 2011-12. Slightly over half of the growth in this industry is concentrated in employment agencies, temporary help and leasing services, janitorial and cleaning services, exterminating and pest control services, and landscaping. In this respect, Florida is part of a national trend. According to the U.S. Department of Labor, the employment services sector is expected to be among those that provide the most new jobs. However, Florida differs from the nation in that our single fastest growing industry does **not** continue to be education and health services. In part, this is a data collection problem. Many companies providing temporary help and leasing services are actually benefiting the other sectors.

Five industry sectors are expected to shed jobs this year: manufacturing, information, financial activities, construction, and professional and business services. Altogether, 108,100 jobs will be adversely affected, with 62% of them coming from the construction sector. After three years of phenomenal growth, this is consistent with the persistently weak housing market forecast. Strength will not return to this industry during the forecast period, although more typical growth returns in Fiscal Year 2010-11.

Florida Industry	Percent of Total Average Annual Employment, 2006	Average Annual Wage, 2006
Total		\$38,497
Natural Resources and Mining	1.2%	\$24,174
Construction	8.0%	\$40,741
Manufacturing	5.1%	\$45,721
Trade, Transportation, and Utilities	20.0%	\$35,310
Information	2.1%	\$55,021
Financial Activities	6.8%	\$54,474
Professional and Business Services	16.9%	\$41,679
Education and Health Services	11.8%	\$39,802
Leisure and Hospitality	11.4%	\$20,035
Other Services	3.1%	\$26,976
Government	13.4%	\$42,977

Construction Continues to Drag... Vigorous home price appreciation that outstripped gains in income and the use of speculative financing arrangements made Floridians particularly vulnerable to the decelerating housing market and interest rate risks. In 2006, almost 47% of all mortgages in the state were considered “innovative” (interest only and pay option ARM). With the federal funds rate holding around 5.75%, the meltdown in the subprime mortgage market and the subsequent credit crunch, housing starts are well into a significant decline that continues through Fiscal Year 2008-09 before beginning a modest rebound. Single-family starts are the primary driver. Total construction expenditures follow a similar pattern, never returning to the 2005-06 level during the forecast period. As the availability of financing for commercial real estate tightens, growth in private nonresidential construction is projected to decelerate to 13.0% this year from a high of 19.4% in Fiscal Year 2006-07, and then dip into negative territory for two years before returning to growth in the out-years. Meanwhile, after posting a 20% gain last year, public construction activity is projected to expand 21.5% this fiscal year and then decline 6.4% next year and 1.1% in the following year, before returning to modest growth.

Population Growth Slower But Steady... Population growth has hovered between 2.0% and 2.6% since the mid 1990’s; however, the population growth rate is expected to slow during the immediate forecast period, reaching a high of only 1.77% in Fiscal Year 2011-12. Some of the slower growth is attributable to the impact the national economic downturn is having on domestic migration decisions. Most of Florida’s growth is from net migration: 87.5 percent between April 1, 2000 and April 1, 2007. Even so, these rates allow Florida to stay on track to become the third largest state in the nation sometime after 2010, surpassing New York. And in 2007, the state’s age mix shifted for the first time to produce a higher percentage of persons aged 45-64 than persons aged 25-44, a phenomenon arising from the aging baby boom population.
