Key Economic Variables Improving

Simplified Flow Of Major Drivers
In 2013, Florida’s economic growth remained in positive territory, matching the state’s revised 2012 growth rate. State Gross Domestic Product (GDP) showed Florida with a ranking of 18th in the nation with a real growth gain of 2.2%, moving Florida above the slowing national average of 1.8% for the first time since 2006.
In the latest data, Florida finished the second quarter of the 2014 calendar year with 1.7% growth over the preceding quarter, surpassing the national growth rate of 1.5% and ranking 13th among all states. Similarly, the results for the entire 2013 calendar year had shown that Florida was ranked 13th in the country with personal income growth of 2.9% which was higher than the national average of 2.6%.
Current Employment Conditions

**October Nonfarm Jobs (YOY)**
- US: 1.9%
- FL: 2.7%
- YR: 206,900 jobs
- Peak: -196,000 jobs

**October Unemployment Rate**
- US: 5.8%
- FL: 6.0% (578,392 people)

**Highest Monthly Rate**
- 11.4% (December 2009 through March 2010)

**Lowest Monthly Rate**
- 3.3% (January through August 2006)
Good News:
Recent Slowing in the Unemployment Rate Decline Relative to the US Caused By FL Gains in the Participation Rate

Beginning in January 2014, the participation rate strengthened as improving job prospects began to encourage people to rejoin or enter the labor force. At 60.8%, May marked the fifth consecutive month of increases in the participation rate. In the latest reading for October, the participation rate was 60.6 percent. Overall, this positive shift caused the decline in the FL unemployment rate to slow relative to the US, but the reason is actually a signal of a strongly improving economy. Among all unemployed, the share of those reentering the labor force increased from 25.0% in October 2013 to 27.2% in October 2014. The share of new entrants of all unemployed increased as well to 11.7% in October 2014 from 8.8% in October 2013.

Florida’s Job Market

- The job market is still recovering – Florida is 196,000 jobs short of the most recent peak. Rehiring, while necessary, will not be enough.

- Florida’s prime working-age population (aged 25-54) is forecast to add about 4,200 people per month, so the hole is deeper than it looks.

- It would take the creation of about 720,000 jobs for the same percentage of the total population to be working as was the case at the peak.
Employment Still Down from Peak Levels, But Improving...

Seven years past March 2007, Florida was still -4.2% below the peak. In total, 17 counties had gained employment relative to their levels at that point. Last year, there were only ten.
Florida’s average annual wage has typically been below the US average. The preliminary data for the 2013 calendar year showed that it further declined to 87.6% of the US average, but this was a slight change from the 87.7% posting in 2012. Although Florida’s wage level actually increased over the prior year, the US average annual wage increased more.
The first cohort of Baby Boomers became eligible for retirement (turned age 65) in 2011. Only three cohorts have entered the retirement phase: 2011, 2012, and 2013. This is a small percentage (14.5%) of all boomers in Florida today.

In 2000, Florida’s working age population (ages 25-54) represented 41.5 percent of the total population. With the aging Baby Boom generation, this population now represents 38.8 percent of Florida’s total population and is expected to represent 36.2 percent by 2030.
Population Growth Recovering

- Population growth is the state’s primary engine of economic growth, fueling both employment and income growth.

- Population growth is expected to continue its recovery, showing increasing rates of growth over the next few years. In the near-term, growth is expected to average 1.39% between 2014 and 2015 – and then strengthen to a slightly higher 1.41% between 2015 and 2020. Most of Florida’s population growth through 2030 will be from net migration (93.1%). Nationally, average annual growth will be about 0.74% between 2013 and 2030.

- The future will be different than the past; Florida’s long-term growth rate between 1970 and 1995 was over 3%.

- Florida is on track to break the 20 million mark prior to April 1, 2016, becoming the third most populous state sometime before then – surpassing New York.
Florida’s population:
- was 15,982,824 in 2000
- was 18,801,332 in 2010
- is forecast to grow to 23,805,958 by 2030
Florida’s Population Growth

Population:
- Average annual increase between 2000 and 2006 was: 361,942
- Average annual increase between 2007 and 2013 was: 135,463

Population is forecast to increase on average by:
- 271,827 between 2014 and 2015 --- a gain of 745 per day
- 286,035 between 2015 and 2020 --- a gain of 784 per day
- 268,340 between 2020 and 2025 --- a gain of 735 per day
- 250,977 between 2025 and 2030 --- a gain of 688 per day

| 2019-2020 | 522200 |
| 2020-2025 | 554600 |
| 2025-2030 | 586600 |
Between 2010 and 2030, Florida’s population is forecast to grow by almost 5 million persons.

Florida’s older population (age 60 and older) will account for most of Florida’s population growth, representing 55.5 percent of the gains.

Florida’s younger population (age 0-17) will account for 14.2 percent of the gains.
Florida Housing is Generally Improving

Building permit activity, an indicator of new construction, is back in positive territory, showing strong (36.6%) calendar year growth in 2012. While still robust, data for the 2013 calendar year indicates that the increase in permits (33.4%) was slightly below the prior year. Despite the strong percentage growth in both years, the level is still low by historic standards. Residential data for the first ten calendar months of 2014 indicate slowing activity; year-to-date activity through October is running below last year for the same period, although single family data is slightly higher (+1.51 percent) than last year’s data at the same point in time.
2013 Building Permit Activity Relative to the County’s Peak during the Period 2000-2007
Existing Home Sales Volume In 2014 Looks Like It Will Exceed 2013, and Nearly Match 2005 Peak...

While Existing Home Price Gains Have Dropped from a Summer High, They Have Gained Relative To The National Median (84.8%).

Data through October 2014
Documentary Stamp Tax collections have moved slightly above (+1.8%) the 2013 level for the first ten months of the 2014 calendar year.
Sales Mix Still Points To Lower Prices

- Financed sales ended September 2014 with a higher share than they had September 2013 (38.2% versus 34.3%); shares for both REO & Short Sales and Cash Sales have drifted slightly downwards. After converging, the share of financed sales has pulled consistently ahead since May 2014.

- While short sales activity has been strong in some states, that is not the case in Florida where the share of total sales is high but not relative to a year ago. There were 4,961 short sales in September 2013, and 3,972 in September 2014. To the extent short sales increase, the foreclosure pipeline will be reduced.
Foreclosures Are Still A Florida Issue

First Six Months of 2014...

- Highest State for # of Filings
- Highest State for Foreclosure Rate
- Among US Metro Area rates: 9 of the top 10 highest metro rates in the nation were in Florida.

Miami-Fort Lauderdale-Pompano Beach #1
Orlando-Kissimmee #2
Port St. Lucie #3
Palm Bay-Melbourne-Titusville #4
Tampa-St. Petersburg-Clearwater #5
Lakeland #6
Deltona-Daytona Beach-Ormond Beach #7
Ocala #8
Jacksonville #9
Days to Foreclose

Foreclosure Process (once begun)
- 925 Days – 2.5 yrs – in Florida (3rd Longest Period in Nation in 2014:Q2)
- At the beginning of 2007, Florida was at 169 days or less than 6 months.

Average Days to Foreclose

Data from RealtyTrac
After being ranked first for many months, Florida has now moved to fifth place among states for non-current mortgages (a measure of delinquencies and foreclosures). A major part of this shift is a reduction in the number of delinquent mortgages which reduces the incoming pipeline. Florida’s “underwater” homes declined from a high of 50% of all residential mortgages to 15% in the most recent data.
The 2013 percentage of 66.1 is the lowest since 1994, and it’s below the long-term average. The third quarter of the 2014 calendar year has dropped further to 62.4%. If this becomes the final percentage for the year, it will be the lowest level seen since the data series began in 1984.
Residential Rental Vacancies Still Tightening; Price Pressure Starting to Appear in Orlando and Jacksonville
Credit Conditions Generally Improving

*Question to Senior Loan Officers:* Over the past three months, how have your bank’s credit standards for approving applications from individuals for **prime residential mortgage loans** to purchase homes changed?

April 2014 Senior Loan Officer Opinion Survey on Bank Lending Practices (Federal Reserve Board)

Banks have generally been easing lending standards and terms for certain types of loans, including C&I (commercial and industrial), commercial real estate, and credit card loans. Demand for credit has also increased; however, it is still difficult for homeowners without pristine credit to get mortgages.
Nationally, consumer sentiment had been improving since the low point of the Great Recession, but fell in August 2011 to near the lowest level of the recession and not far from the lowest level ever posted. Since then, the reading has moved upward. The sentiment reading for November (88.8) is above the index average since inception (85.1) and the highest reading since July 2007.
Economy Recovering

Florida growth rates are generally returning to more typical levels and continue to show progress. However, the drags are more persistent than past events, and it will take a few more years to climb completely out of the hole left by the recession. In the various forecasts, normalcy has been largely achieved by FY 2016-17. Overall...

- The recovery in the national economy is well underway. While most areas of commercial and consumer credit have strengthened – residential credit still remains somewhat sluggish and difficult for consumers to access.

- By the close of the 2013-14 fiscal year, several key measures of the Florida economy had returned to or surpassed their prior peaks.
  - Most of the personal income metrics (real per capita income being a notable exception) and all of the tourism counts exceeded their prior peaks.
  - Still other measures were posting solid year-over-year improvements, even if they were not yet back to peak performance levels.
  - In the current forecast, none of the key construction metrics show a return to peak levels until 2022-23.
Upside Risk for Construction

- The “shadow inventory” of homes that are in foreclosure or carry delinquent or defaulted mortgages may contain a significant number of “ghost” homes that are distressed beyond realistic use, in that they have not been physically maintained or are located in distressed pockets that will not come back in a reasonable timeframe. This means that the available housing supply has become two-tiered – viable homes and seriously distressed homes.

- In addition, RealtyTrac has begun tracking “zombie” foreclosures (“owner-vacated properties in the foreclosure process”). Their estimate is that Florida has 54,908 owner-vacated properties (or 36% of the national total), the most by far of any state.

- To the extent that the number of viable homes is limited, new construction may come back quicker than expected.
General Revenue Forecast

The growth rates for FY 2012-13 and FY 2013-14 are slightly distorted by the receipt of the $200.1 million deposit from the National Mortgage Settlement Agreement. After adjusting for this deposit, the underlying growth rates are 6.3% and 4.7%, respectively.

In FY 2014-15, projected General Revenue collections are expected to surpass the prior peak in 2005-06.
