

**Demographic Estimating Conference
Executive Summary
November 7, 2012**

The Demographic Estimating Conference met on November 7, 2012 to adopt a new population forecast. The data reflect a revised 2010 Census count, revised population estimates for 2011 and 2012, and recent demographic and economic-related data.

Population growth in Florida continues to rebound but at relatively low levels and rates of growth. Historically, Florida’s population growth has been driven by net migration (more people permanently moving into the state than leaving). However, net migration fell to record low levels during much of 2008 and into 2009. During that time period, natural increase (births minus deaths) actually exceeded net migration. The low levels of net migration were largely due to national economic conditions, including weakened housing markets and other lingering effects from the Great Recession, that make it difficult for people to relocate.

The final population estimate for April 1, 2012 indicates annual population growth of less than one percent as the state’s economy continues its recovery (.90%). Annual population change is expected to exceed 200,000 net new residents in 2013 and remain above that threshold for the remainder of the forecast horizon.

April 1	Population	Percent Change	Change
2012	19,074,434	0.90%	169,364
2013	19,275,252	1.05%	200,818
2014	19,498,713	1.16%	223,461
2015	19,759,338	1.34%	260,625
2016	20,038,213	1.41%	278,875
2017	20,321,221	1.41%	283,008
2018	20,601,973	1.38%	280,752
2019	20,877,201	1.34%	275,228
2020	21,148,923	1.30%	271,722

Between April 1, 2010 and April 1, 2020, population growth is expected to average 234,627 net new residents per year, representing a compound growth rate of 1.18% over this 10-year time horizon. These increases are analogous to adding a city the size of Hialeah every year. During 2016, Florida’s population is expected to break the 20-million mark.
